

Cyber Café Assistant System

Project Overview

A full-stack system designed to automate common cyber café tasks like passport photo generation, PDF processing, and auto form filling. The goal is to reduce manual work and save time.

1. Passport Photo Generator

- 1 Upload image
- 2 Auto background removal
- 3 Resize to passport size (35×45 mm)
- 4 Generate multiple copies (grid)
- 5 Export print-ready PDF

Benefit: Reduces photo editing time from ~10 minutes to 1–2 minutes.

2. Auto Form Filler

- 1 Save customer details (name, Aadhaar, etc.)
- 2 Upload PDF forms
- 3 Auto-fill fields
- 4 Download ready form

Benefit: Eliminates repetitive typing in cyber cafés.

3. PDF Tools

- 1 Merge PDFs
- 2 Compress PDFs
- 3 Convert images to PDF

Benefit: Handles common document tasks in one place.

Tech Stack

- 1 Frontend: React, Tailwind CSS, Axios
- 2 Backend: Spring Boot (Java), REST APIs
- 3 Libraries: OpenCV, rembg/remove.bg, PDFBox/iText, Tesseract OCR (optional)

Architecture

React (UI) → Spring Boot (API) → Processing Layer (Image & PDF logic) → Storage (Local/Database)

Development Plan

- 1 Week 1: Passport photo module
- 2 Week 2: PDF tools
- 3 Week 3: Form filler
- 4 Week 4: UI polish and deployment

Resume Value

- 1 Real-world problem solving
- 2 Full-stack development
- 3 Automation skills
- 4 Product thinking

Final Description

Built a full-stack cyber café automation system to generate passport photos, process PDFs, and auto-fill forms using Spring Boot and React.
